

CLAYMORE BLUEPRINTSSM STRATEGY

Zacks SMID Select Portfolio **SERIES 17**

UNIT INVESTMENT TRUSTS

Investment Objective and Principal Investment Strategy

The Zacks SMID Select Portfolio, Series 17 ("Trust") seeks to provide total return primarily through capital appreciation and secondarily through dividend income. The Zacks SMID Select Unit Investment Trust Strategy is an investment strategy that uses a quantitative selection process to determine the constituents of a final portfolio. The Sponsor selects securities for the Trust through a screening process performed on all companies listed in a primary database compiled by Zacks Investment Research, Inc. ("Zacks"). The screening process to determine the actual investment portfolio of the Trust was run approximately one to two weeks before the deposit of the Trust. The portfolio is comprised of 50 stocks of which 25 are classified as growth stocks and 25 are classified as value stocks. The stocks in the portfolio are approximately equally-weighted as of the date of deposit. This weighting may change slightly if a stock qualifies under both screens and would be double counted to include a weighting in each composite strategy.

Security Selection

The Trust's portfolio is selected based on the following three-step process and is approximately equally-weighted as of the initial date of deposit (the "Inception Date"):

Step 1: Zacks Growth Screening Process

The growth portion of the Trust's portfolio is reduced to approximately 25 small-, mid- and/or large-capitalization growth stocks by following pre-set quantitative investment criteria, which includes the following screens:

- The stock has a Zacks Rank of "Strong Buy" as of the portfolio construction date, as well as at least \$50 million in annual sales and a share price of at least \$5.00.
- Eliminate all stocks that do not have at least \$100 million in market capitalization and less than \$300,000 liquidity, where liquidity is defined as price multiplied by average three month daily volume.
- Calculate the year-to-year annual sales growth for each stock for the past three years.
- Average the year-to-year annual sales growth for the previous three-year period.
- Select the 25 stocks with the largest three-year sales growth.

Step 2: Zacks Value Screening Process

The value portion of the Trust's portfolio is reduced to approximately 25 small-, mid- and/or large-capitalization value stocks by following pre-set quantitative investment criteria, which includes the following screens:

- Exclude all closed-end funds, indices, real estate investment trusts and Canadian stocks from the investable universe.
- Exclude all stocks not listed on the NYSE or NASDAQ exchanges.
- Exclude all stocks that have a price under \$1.00 as of the portfolio construction date.
- Rank all stocks that remain in the investable universe by descending market capitalization.
- Exclude all stocks that do not have at least \$100 million in market capitalization and less than \$300,000 in liquidity, where liquidity is defined as price multiplied by average three month daily volume.

SECURITY SELECTION CONTINUED ON NEXT PAGE

HYPOTHETICAL STRATEGY GROWTH OF \$10,000 VS. RUSSELL 2000[®] INDEX (12/31/95 – 9/30/09)

Source: Claymore Securities, Inc.

Growth of \$10,000 chart represents a hypothetical \$10,000 investment in the strategy (not any actual Trust) and the Russell 2000[®] Index from December 31, 1995 through September 30, 2009. The graph is based on monthly net returns, assuming the initial investment of \$10,000. All dividends during a month, including those on stocks trading ex-dividend as of the last day of the month, are assumed to be reinvested at the end of that month. These hypothetical results represent past performance of the strategy and not the actual Trust. Hypothetical performance is based on the assumption that the portfolio reconstitution would have occurred annually. It is also assumed that the investment is liquidated at the end of the time series shown here, resulting in application of relevant fees and charges. Past performance does not guarantee future results.

HYPOTHETICAL STRATEGY AVERAGE ANNUAL TOTAL RETURNS VS. RUSSELL 2000[®] INDEX (THROUGH 12/31/08)

Period	Hypothetical Strategy	Russell 2000 [®] Index
10-Year	10.53%	3.02%
5-Year	-9.46%	-0.93%
3-Year	-24.21%	-8.29%
1-Year	-58.53%	-33.79%

Source: Claymore Securities, Inc.

Average annual total return measures the change in the value of an investment assuming reinvestment of all dividends and capital gains and payment of applicable Trust expenses and sales charges. Average annual total returns are for the periods noted through 12/31/08. These hypothetical results represent past performance of the strategy and not the actual Trust. Past performance does not guarantee future results. There can be no assurance that the Trust will achieve better performance than the Russell 2000[®] Index over any investment period in the Trust or over rollover periods, if available. All strategy performance is hypothetical (not any actual Trust) and reflects Trust sales charges (full sales charge in first year of 2.95% and reduced rollover charge thereafter of 1.95%) and expenses but not brokerage commissions on stocks or taxes. Hypothetical performance is based on the assumption that the portfolio reconstitution would have occurred annually. Past performance is no guarantee of future results. Actual returns will vary from hypothetical strategy returns due to timing differences and because the Trust may not be invested equally in all stocks or be fully invested at all times. In any given year the strategy may lose money or underperform the Index. Monthly gross returns are calculated by taking month-end prices, subtracting them from the prices at the end of the following month (adjusting for any stock splits that might have occurred during the month) and adding dividends (in the case of total returns) received for the period divided by starting price. High returns are highly unusual and cannot be sustained. Investors should also be aware that these returns were primarily achieved during favorable market conditions.

The Russell 2000[®] Index is comprised of the smallest 2000 companies in the Russell 3000[®] Index, representing approximately 10% of the Russell 3000 total market capitalization. Indices are statistical composites and their returns do not include payment of any sales charges or fees an investor would pay to purchase the securities they represent. Such costs would lower performance. This Index is unmanaged and it is not possible to invest directly in this Index. The historical performance of the Index is shown for illustrative purposes only; it is not meant to forecast, imply or guarantee the future performance of any particular investment or the Trust, which will vary. Securities in which the Trust invests may differ from those in the Index. The Trust will not try to replicate the performance of these indices and will not necessarily invest any substantial portion of its assets in securities in the Index. There is no guarantee that the perceived intrinsic value of a security will be realized.

Security Selection (continued)

- Select the best two stocks in each sector that have the lowest price-to-book ratio.
- Of those stocks, select the 25 stocks with the lowest price-to-book ratio as calculated in the Zacks' database.
- Limit American Depositary Receipt ("ADR") exposure to 15% of the entire portfolio or lower; if ADR exposure is greater than 15%, eliminate the worst-ranking ADRs by price-to-book ratio and select the next best non-ADR in the sector.

Step 3: Combine growth stocks with value stocks to form one approximately equally-weighted 50 stock portfolio.

HYPOTHETICAL STRATEGY ANNUAL TOTAL RETURNS* VS. RUSSELL 2000® INDEX

Annual total returns are calculated using closing prices beginning 12/31 the previous year and ending 12/31 the stated year, for the noted 1-year period.

Year**	Hypothetical Strategy	Russell 2000® Index
1996	21.87%	16.49%
1997	15.62%	22.36%
1998	16.80%	-2.55%
1999	78.61%	21.26%
2000	11.39%	-3.02%
2001	10.47%	2.49%
2002	6.96%	-20.48%
2003	90.33%	47.25%
2004	22.15%	18.33%
2005	14.42%	4.55%
2006	19.85%	18.37%
2007	-12.42%	-1.57%
2008	-58.10%	-33.79%
9/30/09	48.56%	22.43%

Source: Claymore Securities, Inc.

* Total return measures change in the value of an investment assuming reinvestment of all dividends and capital gains. These hypothetical results represent past performance of the strategy and not the actual Trust. Past performance does not guarantee future results. There can be no assurance that the Trust will achieve better performance than the Russell 2000® Index or over any investment period in the Trust or over rollover periods, if available.

**It is assumed that the investment is liquidated at the end of the time series shown here, resulting in application of relevant fees and charges.

HYPOTHETICAL STRATEGY HISTORICAL RISK/RETURN VS. RUSSELL 2000® INDEX

Annualized data for the time period 12/31/95 – 9/30/09

Source: Claymore Securities, Inc.

HYPOTHETICAL STRATEGY VS. RUSSELL 2000® INDEX RISK ANALYSIS¹

Life of Strategy (12/31/95 to 9/30/09)	Hypothetical Strategy	Russell 2000
Standard Deviation	27.94%	20.92%
Sharpe Ratio	0.41	0.13
Alpha	8.76%	0.00%
Beta	1.14	1.00
Up-Market Capture Ratio	133.82%	100.00%
Down-Market Capture Ratio	99.98%	100.00%

Past performance does not guarantee future results. It is not possible to invest directly in an index.

¹ Claymore calculates numerical data illustrated from raw data received from partners which are calculated from Zacks Backtesting Database. Calculations are based on annualized figures.

PORTFOLIO CHARACTERISTIC DEFINITIONS

Standard deviation is a statistical measurement that depicts how widely returns vary over a given period of time. The measurement is generally used to understand the range of returns that are most likely for a given portfolio. Generally, a higher standard deviation indicates a more risky portfolio.

Sharpe ratio is a measure of reward per unit of risk. A higher Sharpe ratio indicates outperformance on a historical risk-adjusted performance basis, while a lower Sharpe ratio indicates underperformance on a historical risk-adjusted performance basis.

Alpha is a statistical measurement that depicts the performance difference between a portfolio's return and an underlying performance benchmark, given the portfolio's level of volatility, measured by beta. The benchmark index will always reflect an alpha of 0.00%. A positive alpha indicates a portfolio has performed better than its beta would predict in the stated period.

Beta is the measure of a portfolio's sensitivity to the Index. By definition, the beta of the Index is 1.00. Any portfolio with a higher beta is more volatile than the Index. Likewise, any portfolio with a lower beta will be less volatile than the Index in the stated period.

The **up-market capture ratio** is a measure of a portfolio in up-markets relative to the Index during the same period. A ratio value of 115 indicates that the portfolio has outperformed the market index by 15% in periods when the Index has risen.

The **down-market capture ratio** is the direct opposite of the up-market capture ratio, gauging performance of the portfolio relative to the Index in down-markets. A ratio value of 80 would indicate the portfolio has declined only 80% as much as the declining overall market, indicating relative outperformance.

All strategy performance is hypothetical (not any actual Trust) and reflects Trust sales charges (full sales charge in first year of 2.95% and reduced rollover charge thereafter of 1.95%) and expenses but not brokerage commissions on stocks or taxes. Hypothetical performance is based on the assumption that the portfolio reconstitution would have occurred annually. Past performance is no guarantee of future results. Actual returns will vary from hypothetical strategy returns due to timing differences and because the Trust may not be invested equally in all stocks or be fully invested at all times. In any given year the strategy may lose money or underperform the Index. Monthly gross returns are calculated by taking month-end prices, subtracting them from the prices at the end of the following month (adjusting for any stock splits that might have occurred during the month) and adding dividends (in the case of total returns) received for the period divided by starting price. High returns are highly unusual and cannot be sustained. Investors should also be aware that these returns were primarily achieved during favorable market conditions.

There is no guarantee the strategy will outperform the Index. The Index is a statistical composite and its returns do not include payment of any sales charges or fees an investor would pay to purchase the securities they represent. Such costs would lower performance. It is not possible to invest directly in this index. The historical performance of the Index is shown for illustrative purposes only; it is not meant to forecast, imply or guarantee the future performance of any particular investment or the Trust, which will vary. Securities in which the Trust invests may differ from those in the Index. The Trust will not try to replicate the performance of the Index and will not necessarily invest any substantial portion of its assets in securities in the Index. There is no guarantee that the perceived intrinsic value of a security will be realized.

RISK CONSIDERATIONS As with all investments, you may lose some or all of your investment in the Trust. No assurance can be given that the Trust's investment objective will be achieved. The Trust also might not perform as well as you expect. This can happen for reasons such as these: **Stock prices can be volatile.** The value of your investment may fall over time. Market value fluctuates in response to various factors. These can include stock market movements, purchases or sales of securities by the Trust, government policies, litigation, and changes in interest rates, inflation, the financial condition of the securities' issuer or even perceptions of the issuer. Units of the Trust are not deposits of any bank and are not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. **Due to the current state of the economy, the value of the securities held by the Trust may be subject to steep declines or increased volatility due to changes in performance or perception of the issuers.** In the last year, economic activity has declined across all sectors of the economy, and the United States is experiencing increased unemployment. The current economic crisis has affected the global economy with European and Asian markets also suffering historic losses. Extraordinary steps have been taken by the governments of several leading economic countries to combat the economic crisis; however, the impact of these measures is not yet known and cannot be predicted. **The Trust includes securities of companies in the consumer products sectors.** General risks of companies in the consumer products sectors include cyclicalities of revenues and earnings, economic recession, currency fluctuations, changing consumer tastes, extensive competition, product liability litigation and increased government regulation. A weak economy and its effect on consumer spending would adversely affect consumer products companies. **The Trust invests in stocks issued by small-capitalization and mid-capitalization companies.** These stocks customarily involve more investment risk than stocks of larger capitalization companies. Small-capitalization and mid-capitalization companies may have limited product lines, markets or financial resources and may be more vulnerable to adverse general market or economic developments. **Share prices or dividend rates on the securities in the Trust may decline during the life of the Trust.** There is no guarantee that the issuers of the securities will declare dividends in the future, and, if declared, whether they will remain at current levels or increase over time. **The Trust invests in ADRs and U.S.-listed foreign securities.** The Trust's investment in ADRs and U.S.-listed foreign securities presents additional risk. ADRs are issued by a bank or trust company to evidence ownership of underlying securities issued by foreign corporations. Securities of foreign issuers present risks beyond those of domestic securities. More specifically, foreign risk is the risk that foreign stocks will be more volatile than U.S. stocks due to such factors as adverse economic, currency, political, social or regulatory developments in a country, including government seizure of assets, excessive taxation, limitations on the use or transfer of assets, the lack of liquidity or regulatory controls with respect to certain industries or differing legal and/or accounting standards. **The Trust includes securities issued by companies headquartered or incorporated in countries considered to be emerging markets.** Emerging markets are generally defined as countries with low per capita income in the initial stages of their industrialization cycles. Risks of investing in developing or emerging countries include the possibility of investment and trading limitations, liquidity concerns, delays and disruptions in settlement transactions, political uncertainties and dependence on international trade and development assistance. Companies headquartered in emerging market countries may be exposed to greater volatility and market risk. **The Trust includes a REIT.** REITs may concentrate their investments in specific geographic areas or in specific property types, such as, hotels, shopping malls, residential complexes and office buildings. The value of the REITs and other real estate securities and the ability of such securities to distribute income may be adversely affected by several factors, including: rising interest rates; changes in the global and local economic climate and real estate conditions; perceptions of prospective tenants of the safety, convenience and attractiveness of the properties; the ability of the owner to provide adequate management, maintenance and insurance; increased competition from new properties; the impact of present or future environmental legislation and compliance with environmental laws; changes in real estate taxes and other operating expenses; adverse changes in governmental rules and fiscal policies; adverse changes in zoning laws; declines in the value of real estate; the downturn in the subprime mortgage lending market in the United States; and other factors beyond the control of the issuer of the security. **Inflation may lead to a decrease in the value of assets or income from investments.** The Sponsor does not actively manage the portfolio. The Trust will generally hold, and may continue to buy, the same securities even though a security's outlook, market value or yield may have changed. **Please see the Trust prospectus for more complete risk information.**

PORTFOLIO SUMMARY

Inception Date	November 2, 2009
Termination Date	February 1, 2011
Initial Offer Price	\$10.00
Minimum Investment	\$250.00
Number of Issues	50
Historical Annual Dividend Distribution	\$0.0574
Distributions*	25th day of each month commencing on November 25, 2009, if any

*The amount of distributions of the Trust may be lower or greater than the above-stated amount due to certain factors that may include, but are not limited to, a change in the dividends paid by issuers, a change in Trust expenses or the sale or maturity of securities in the portfolio. Fees and expenses of the Trust may vary as a result of a variety of factors including the Trust's size, redemption activity, brokerage and other transaction costs and extraordinary expenses.

TICKETING INFORMATION

CUSIP (cash payment)	18387G687
CUSIP (reinvestment accounts)	18387G695
CUSIP (fee-cash)	18387G703
CUSIP (fee-reinvest)	18387G711
Ticker	CZACQX

SALES CHARGES

Sales Charge ("S/C") is based on a \$10 per unit offering price.

	Amount Per Unit	Max Per Unit %
Up-front S/C	\$0.100	1.00%
Year One Deferred S/C	\$0.145	1.45%
Creation and Development ("C&D") Fee	\$0.050	0.50%
Total S/C	\$0.295	2.95%

The deferred sales charge ("DSC") will be deducted in monthly installments on the last business day commencing March 2010 and ending May 2010. If units are redeemed prior to the DSC period, the entire DSC will be collected.

For unit prices other than \$10, percentages of initial sales charge, C&D fees, and deferred sales charges will vary. Early redemption of units will still cause payment of the deferred sales charge.

VOLUME DISCOUNT BREAKPOINTS

Purchase Amount	Sales Charge Reductions (as a % of the Public Offering Price)
Less than \$50,000	0.00%
\$50,000 - \$99,999	0.25%
\$100,000 - \$249,999	0.50%
\$250,000 - \$499,999	0.75%
\$500,000 - \$999,999	1.00%
\$1,000,000 or more	1.50%

UITs are fixed and not actively managed. An investment in this fixed portfolio should be made with an understanding of the risks involved with owning various types of investments. Industry predictions may not materialize and securities selected for the Trust may not participate in overall industry growth, if any. There is no guarantee that the portfolio will achieve its investment objective. Units, when redeemed, may be worth more or less than their original purchase price.

This UIT is part of a long-term strategy, and investors should consider their ability to invest in successive portfolios, if available, at the applicable sales charge. There are tax consequences associated with an investment from one series to the next. Investors should consult their tax advisor to determine tax consequences associated with an investment from one portfolio to the next. Units of the portfolio may be well suited for purchase by Individual Retirement Accounts or other qualified retirement plans. Consult an attorney or tax advisor regarding tax consequences associated with the purchase of units. Claymore Securities, Inc. does not offer tax advice.
