Number of Securities	97
Average Market Capitalization <sup>1</sup>	\$5.4 Billion
Price/Earnings (P/E) <sup>2</sup>	5.4x
Price/Book (P/B) <sup>3</sup>	1.5x
Beta <sup>4</sup>	1.31
Alpha <sup>5</sup>	2.36
Standard Deviation <sup>6</sup> (Fund/MSCI World Index)	31.96/22.54

All data as of 6/30/2010 and is subject to change on a daily basis. See next page for footnotes.

The Claymore/S&P Global Dividend Opportunities Index ETF seeks investment results that correspond generally to the performance, before the Fund's fees and expenses, of an equity index called the S&P Global Dividend Opportunities Index. The Index consists of 100 common stocks, master limited partnerships ("MLPs") and American depositary receipts ("ADRs") that offer high dividend yields chosen from a universe consisting of the stocks listed on the exchanges of those countries included in the S&P Broad Market Index. Potential Index constituents include common stocks, MLPs and ADRs with market capitalizations greater than \$1.5 billion at the time of reconstitution, which for ADRs is determined based on an evaluation of the underlying security, and includes securities of mid- and large-capitalization companies, as defined by Standard & Poor's, a division of The McGraw-Hill Companies, Inc., the Fund's index provider. The Fund will normally invest at least 90% of its total assets in common stocks, MLPs and ADRs that comprise the Index and investments that have economic characteristics that are substantially identical to the economic characteristics of the component securities that comprise the Index. The Fund generally will invest in all of the stocks comprising the Index in proportion to their weightings in the Index.

## AVERAGE ANNUAL TOTAL RETURNS as of 6/30/2010

	YTD	3-Month	1-Year	3-Year	Since Inception (6/25/07)
<b>Market Price</b>	-12.24%	-13.25%	19.13%	-15.28%	-15.18%
After Tax on Shares Held	-13.36%	-13.99%	17.07%	-17.18%	-17.07%
After Tax on Shares Sold	-7.92%	-8.62%	12.52%	-13.58%	-13.49%
<b>NAV</b>	-11.01%	-11.92%	21.71%	-14.70%	-14.81%
After Tax on Shares Held	-12.14%	-12.66%	19.62%	-16.61%	-16.71%
After Tax on Shares Sold	-7.13%	-7.75%	14.19%	-13.13%	-13.21%
MSCI World Index	-9.51%	-12.47%	10.86%	-10.87%	-10.66%
Gross Expense Ratio					3.06%
Expense Cap					0.75%

## CALENDAR YEAR TOTAL RETURNS

Annual total returns are for the noted 1-year periods beginning 12/31 and ending 12/31 the following year.

	2008	2009
<b>Market Price</b>	-49.57%	66.90%
<b>NAV</b>	-49.21%	64.46%

Performance data quoted represents past performance, which is no guarantee of future results, and current performance may be lower or higher than the figures shown. For the most recent month-end performance figures, please visit [www.claymore.com](http://www.claymore.com). The investment return and principal value of an investment will fluctuate with changes in market conditions and other factors so that an investor's shares, when redeemed, may be worth more or less than their original cost. The gross expense ratio reflects the Fund's actual total annual operating expense ratio, gross of any fee waivers or expense reimbursements as of its most recent prospectus. While there is currently a contractual fee waiver in place, some expenses fall outside of this expense cap and therefore net operating expenses may be higher. Without this expense cap, actual returns would be lower.

After tax returns are calculated using the historical highest individual federal marginal income tax rates during the periods shown and do not reflect the impact of state and local taxes. Actual after tax returns depend on an investor's tax situation and may differ from those shown. Since Inception returns assume a purchase of the ETF at the initial share price for share price returns or the initial net asset value (NAV) per share for NAV returns. Returns for periods of less than one year are not annualized. Returns include reinvestment of distributions. Investors should also be aware that these returns were primarily achieved during favorable market conditions and may not be sustainable.

This index is unmanaged and it is not possible to invest directly in this index. The MSCI World Index is a free float-adjusted market capitalization index that measures global developed market equity performance of the developed market country indices of Europe, Australasia, the Far East, the U.S. and Canada.

Spain	10.98%	Belgium	3.49%
Italy	9.61%	Finland	3.48%
Israel	8.44%	Austria	3.48%

## FUND CAPITALIZATION

All data as of 6/30/10 and is provided by Claymore Securities or Morningstar. Data is subject to change on a daily basis and represents a percentage of the Fund's total holdings. The securities mentioned are provided for informational purposes only and should not be deemed as a recommendation to buy or sell.

<sup>1</sup>Average Market Capitalization is the geometric mean of the market capitalizations for all the securities in a fund's portfolio. <sup>2</sup>P/E Ratio is a harmonic weighted average and is equal to a security's market capitalization divided by its after-tax earnings over the most recent 12-month period. <sup>3</sup>P/B Ratio is a harmonic weighted average and is equal to a security's market capitalization divided by its book value. <sup>4</sup>Beta is the measure of a fund's sensitivity to the Index. By definition, the beta of the Index is 1.00. Any fund with a higher beta is more volatile than the Index. Likewise, any portfolio with a lower beta will be less volatile than the index in the stated period. Data displayed is for the previous 3 year period. <sup>5</sup>Alpha is a statistical measurement that depicts the performance difference between a fund's return and an underlying performance benchmark, given a fund's level of volatility, measured by beta. The benchmark will always reflect an alpha of 0.00%. A positive alpha indicates a fund has performed better than its beta would predict in the stated period. Data displayed is for the previous 3 year period. <sup>6</sup>Standard deviation is a statistical measurement that depicts how widely returns vary over a given period of time. The measurement is generally used to understand the range of returns that are most likely for a given portfolio. Generally, a higher standard deviation indicates a more risky portfolio. This is computed by using the trailing monthly total returns for the appropriate time period. Monthly standard deviations are then annualized. Data displayed is for the previous 3 year time period.

**RISK CONSIDERATIONS** Investors should consider the following risk factors and special considerations associated with investing in the Fund, which may cause you to lose money, including the entire principal amount that you invest. **Equity Risk:** The value of the securities held by the Fund will fall due to general market and economic conditions, perceptions regarding the industries in which the issuers of securities held by the Fund participate, or factors relating to specific companies in which the Fund invests. **Foreign Investment Risk:** Investing in non-U.S. issuers may involve unique risks such as currency, political, and economic risk, as well as less market liquidity, generally greater market volatility and less complete financial information than for U.S. issuers. Investment in securities of issuers based in developing or "emerging market" countries entails all of the risks of investing in securities of non-U.S. issuers, as previously described, but to a heightened degree. **Financial Services Sector Risk:** This industry is subject to extensive government regulation, can be subject to relatively rapid change due to increasingly blurred distinctions between service segments, and can be significantly affected by availability and cost of capital funds, changes in interest rates, the rate of corporate and consumer debt defaults, and price competition. In addition, the deterioration of the credit markets since late 2007 generally has caused an adverse impact in a broad range of markets, including U.S. and international credit and interbank money markets generally, thereby affecting a wide range of financial institutions and markets. In particular, events in the financial sector since late 2008 have resulted, and may continue to result, in an unusually high degree of volatility in the financial markets, both domestic and foreign. **Medium-Sized Company Risk:** Investing in securities of these companies involves greater risk as their securities may be more volatile and less liquid than investing in more established companies. These securities may have returns that vary, sometimes significantly, from the overall stock market. **MLP Risk:** Investments in securities of MLPs involve risks that differ from an investment in common stock. Holders of the units of MLPs have more limited control and limited rights to vote on matters affecting the partnership. There are also certain tax risks associated with an investment in units of MLPs. In addition the Fund is subject to **Non-Correlation Risk, Replication Management Risk, Issuer-Specific Changes, and Non-Diversified Fund Risk.** As with any investment, you should consider how your investment will be taxed. The tax information contained in the prospectus is provided as general information. Investors should consult their own tax professional about the tax consequences of an investment as Claymore Securities, Inc. does not offer tax advice. **Please read the Fund's prospectus for more detailed information on these risks and considerations.**
